Letters to the Editor

Evaluation of Serum Lipase as Predictor of Severity of Acute Pancreatitis in Children

Authors' Response

We agree with the concerns addressed by the authors of the letter. We have revised our statistical methods to include a more comprehensive analysis of the data. Our revised analysis confirms the potential of serum lipase as a predictor of severity in acute pancreatitis in children. We apologize for any confusion caused by our previous reporting and we thank the authors for bringing this to our attention.

REFERENCES

Evaluation of Serum Lipase as Predictor of Severity of Acute Pancreatitis in Children

The authors are correct in pointing out the limitations of our study in terms of sample size. However, the results of our study do support the potential utility of serum lipase as a predictor of severity in acute pancreatitis in children.
